## 5-Compartment Trays

### Comparing foam to molded fiber.

5-compartment trays are a staple of any school kitchen, but knowing the difference in the types, and the benefits of each, can help determine which option works best for you. From pricing to material to impact on the environment, these trays are designed to meet the needs of your school, wherever they fall.

**White Foam Tray** - Standard white foam tray made from polystyrene, with a hydrocarbon blowing agent to make Styrofoam. This product is 100% recyclable at a level 6 facility.

**White Biodegradable Foam Tray** - Biodegradable white foam tray is made from polystyrene, with a co2 blowing agent, and enhanced with TDA (Totally Degradable Additive) enabling it to break down over time (90 days to 5 years), even when contained within a land fill. Will not break down during the course of expected use.

**Molded Fiber Tray** - Molded fiber tray is made from recycled milk carton stock and recovered fiber. The tray is durable, and can withstand the functions of expected use. Product will break down in a composting facility in a maximum of 90 days.

These trays are available at  
*P&R Paper Supply.*

## Foil Wraps & Bags

### The benefits and strengths.

Foil food service wraps and bags are an excellent choice for presenting and maintaining the appearance of grab n' go food service items. The paper/foil lamination creates a barrier that retains heat and absorbs steam. The combination of the two materials enables the food wraps and bags to resist curl; thereby leaving your product fresh, and convenient for both transportation and storage.

Foil food service wraps and bags are packaged in cardboard dispensers, keeping each piece flat and easily stored. The dispenser packaging allows for easy access and use. To learn more about foil food service wraps and bags, please contact

*P&R Paper's* customer service department at 909-794-1108.

## Food Boats Economical and convenient.

Food boats are an economical option for food service carry out trays. Their single piece construction creates a product that is both sturdy and durable. Made from clay-coated paperboard, these trays are grease resistant and moisture resistant, without the use of a paper liner. Available in a multitude of sizes, ranging from 1/2 lbs to 5 lbs, these food boats can meet a variety of food service needs.

At *P&R Paper*, food boats are available in many print options ranging from a standard red or green basket weave (with either Kraft or white) to a white tray with our stock "Fresh Express" print. Trays are also available in plain white, and custom print.

For more information on the various options available with these paper food boats/trays, please contact *P&R Paper Supply* customer service.
